

Processing copper and aluminum cables, A/C radiators, w-Waste and other composite materials, it is possible to get quality materials with values which are exponentially higher than their original counterparts.

SEPARATION OF MATERIALS**

WHALE

DOUBLE SHAFT SHREDDER

Whale is a heavy duty and high torque double -shaft shredder with blades, ideal to process a different range of materials reducing their size and making them ready for the following steps of the recovery cycle.

CUSTOM PLANTS

The Tecno Costruzioni technical department is able to listen to the needs of the customer, starting from an analysis of the material(s) supposed to be processed, and taking into account the capacity and the output size required. The software tools for the design of the project, providing us and the customer with 3D drawings and simulations, allow each project to be successfully dealt with.

SHARK

SINGLE SHAFT SHREDDER

The single-shaft shredders Shark are designed for the shredding of materials characterized by high thickness and extreme toughness to the cut. They are the ideal solution for reducing the size of a different range of scrap materials, and they can be included for implementing continuous operation cycles. All the Shark range of shredders comes with a hydraulic pusher and alarms and other safety systems able to halt the operations in case of emergency.

PIRANHA

GRANULATOR MILL

The powerful Piranha granulators are built with high-quality materials, both in terms of structure and electronic components. Inside the cutting chamber, the process of shredding-granulating is carried out through the use of an impressive high-speed rotating shaft , composed of solid steel and with reinforced blades.

ECO COMPACT

SYSTEMS ALL-IN-ONE

The TECNO compact systems are the perfect solution in order to carry out the whole process of size reduction, refining and separation of the most valuable materials . They give you the opportunity to recover, among other valuable commodities, copper and aluminum with percentages of purity close to 100%, thus guaranteeing a rapid ROI.
